We're not just blowing bubbles!

We're taking Tank Level Indication to a new level.

Meet the LevelCom 100 by TMS...

...A one size fits all tank level indicator that monitors depth, volume, weight and the specific gravity of virtually any liquid!

And does it all without special sensors.

No sensor in the tank!

That's right! No expensive or fragile pressure transmitter or sensor in the tank. No more need to empty and gas free tank to repair or calibrate a tank level indicator!

Packed with features!

- 10 point depth/volume/weight "Tank Table" accurately tracks the shape of the tank
- Programmable alarm and control setpoints
- Automatic self-calibration
- Automatic sense line leak and plug detection
- Direct replacement for obsolete mercury or liquid manometers
- 4-20mA input and output options add to the versatility of the LevelCom 100
